TITLE : IMAGE RECORDING/REPRODUCING
DEVICE

ABSTRACT : PROBLEM TO BE SOLVED: To generate a graphical index screen at the point of recording a video without a complicated trouble by taking a still image for index and synthetically managing it with header data of a moving image to be recorded.

SOLUTION: The objective image which fits for the index is prepared at first and the index input key of an indication part 2 is depressed so as to pickup the image in an image pickup part 1. The index screen is recorded in a video data recording part where a recording medium 4 is explained and header data are adjusted and are recorded in a header recording part. When the call of header data is inputted by the index call key of the indication part 2, a control part 3 displays index screen data on a display part 5. Then, an indexing command is sent to the control part 3 from the indication part 2. The control part 3 adds header data for designating the index screen to the still image which is taken in and preserves it in the recording medium 4.
